WORK BOAT CANADA BULLNOSE HIGH SPEED L.C.

The BULLNOSE is a shallow 'V' high speed, high load barge designed for planing speeds in full load condition. It is easily driven on plane with very low horsepower ratings. The boat's unusual hull shape offers much greater directional stability and lift than a standard flat or V-bottom Sea Truck design. The hull design has worked extremely well with twin jet application in difficult maneuvering conditions with no cavitation problems.

In production since 1985 the boat has repeatedly demonstrated above average performance exceeding design specifications by as much as 25% in load carrying capability and high speed performance. Versions are operating in waters throughout the world. They are available in lengths from 24' to 50'.

Standard Features

- 1/4 inch marine grade aluminum bottom plate (5086)
- 1/4" marine grade aluminum sides
- 1/4" tread plate decking
- Self bailing cargo deck
- Outboard or stern drive configuration
